EDUCATION

BEng, Information Engineering & Media, Nanyang Technological University, Singapore — Expected May 2028
GPA: 4.54/5.0 — EAB Dialogue Student Representative (2026)
Relevant coursework: Data Structures & Algorithms, Software Engineering, Object-Oriented Programming, Data Science

Student Exchange Programme, Technical University of Munich, Germany — Oct 2026 — Mar 2027
Relevant coursework: Data Networking, Network Security

Dip, Cybersecurity & Digital Forensics, Ngee Ann Polytechnic, Singapore — Jan 2020 — May 2023
GPA: 3.56/4.0

WORK EXPERIENCE

Java Software Engineer Intern — May 2026 — Aug 2026
Audax Financial Technology — *Bras Basah, SG*

- Spearheaded migration of 6 core Java microservices from Spring Boot 3.5 to 4.0 ahead of EOL deadlines, updating security, JMS, REST configurations & resolving dependency CVEs on 4 services to achieve clean SonarQube scans.
- Developed strategy-pattern Java services to retrieve pending hold transactions from core banking APIs, adding WireMock & Cassandra-backed integration tests to enable end-to-end CASA customer journeys.
- Validated Jenkins/Kubernetes CI/CD deployments & LOAN/CARD customer journeys via Postman, ensuring demo-ready platform stability for stakeholders.

Signal Storeman — Aug 2023 — Aug 2025
Singapore Armed Forces — *Khatib, Singapore*

- Managed the inventory, maintenance, and deployment of critical communications hardware and signal equipment.
- Executed daily logistical workflows and supply chain tracking for sensitive military assets, maintaining strict security and accountability standards.

Quality Assurance Intern — Sep 2022 — Jan 2023
Toppan Ecquaria — *Toa Payoh, SG*

- Performed manual verification & regression testing with Selenium to ensure web product reliability
- Devised Visual Basic & Selenium scripts to streamline data tracking, reducing bug-reporting turnaround by 40%.

PROJECTS

Solo Developer, TF2 Match Analytics Platform (github.com/n4ver/logdashboard) — Apr 2026 — Present

- Engineered a CQRS backend (FastAPI, RabbitMQ, PostgreSQL) that ingests TF2 match logs, publishes domain events, and materializes 10+ read-model projections for match, player, and tournament queries.
- Implemented async write paths (outbox pattern, idempotent event consumers, ingest adapters with Node.js) with Steam OpenID + JWT RBAC, OpenAPI-documented REST APIs, and 130+ pytest tests across services.

Solo Developer, E-sports Stream Dashboard (n4-tv.vercel.app) — Jan 2026 — Feb 2026

- Built a Flask REST API and Vue SPA that ingests logs.tf match data and drives live-stream overlays; deployed on Vercel.

Solo Developer, Hitman (github.com/n4ver/hitman) — Jul 2026 — Present

- Developed a Tauri/Rust desktop app automating custom video game audio asset management with a real-time preview UI.

SKILLS

Programming Languages	Python, Java, JavaScript, Rust
Frameworks & Libs	Spring Boot, Flask, FastAPI, Vue, React, Node.js, Selenium, SQLAlchemy, pytest
Databases	PostgreSQL, Cassandra
Infrastructure & Tools	Git, Docker, Kubernetes, Jenkins, Postman, WireMock, RabbitMQ, SonarQube

CO-CURRICULAR ACTIVITIES

dEEEvelopers, Nanyang Technological University — Aug 2025 — May 2026
Sub-Committee for Training & Development, Special Projects

- Led and facilitated workshops for NTU students on software development topics, such as Git and React, for 50+ students.
- Collaborated on special projects to develop websites for the dEEEvelopers club and school community.
